High Voltage Power Supplies

Series 2290 High Voltage Power Supplies facilitate high voltage device and material testing, as well as high energy physics experimentation. The Model 2290-5 5kV Power Supply provides voltage outputs up to 5000V, and the Model 2290-10 10kV Power Supply offers up to 10,000V. The Model 2290-5 has a 5mA current capacity, and the Model 2290-10 has a 1mA current capacity. These supplies measure both output voltage with 1V resolution and output current with 1µA resolution. In addition to the voltage and current output displays, a third display shows one of four settings: output voltage, voltage limit, current limit, or current trip. These values can be set precisely with the front panel keypad. The settings can also be programmed over the IEEE-488 interface, or the output voltage can be set with an analog control voltage.

Low Noise Ensures Accurate Low Level Measurements

Low output noise is essential when using sensitive measurement instruments to make leakage current or high resistivity measurements. The maximum output ripple for the Model 2290-10 is less than 1V RMS. The maximum output ripple of the Model 2290-5 is 100mV RMS. Two selectable, internal filters on the Model 2290-5 reduce the maximum output ripple to only 3mV RMS. Extremely low noise from both power supplies enables sensitive measurement instruments to make accurate current measurements down to picamp levels.

Protecting User and Instrumentation

Series 2290 Power Supplies and a Model 2290-PM-200 Protection Module protect both user and instrumentation from hazardous voltages. An interlock circuit built into the power supplies can be used to ensure that the output voltage is disabled if a high voltage test fixture access door is open. In addition, all Series 2290 power supplies have low voltage analog outputs to permit safe monitoring of the high voltage and the output current.

When low voltage measurement instrumentation is used in the high voltage circuit, the protection module safely clamps the voltage across the instrument to a maximum value of 200V even when a device under test (DUT) breaks down. Thus, a Series 2290 Power Supply, Model 2290-PM-200 Protection Module, and Keithley accessories provide all the elements for building a safe, high voltage test environment.

TYPICAL APPLICATIONS

• High voltage device breakdown testing
• High voltage component testing
• Insulation testing
• High voltage resistivity measurements
• High energy physics research

ACCESSORIES AVAILABLE

For 2290-5:
- 2290-5-SHV 5kV SHV Female–SHV Female Cable, 3m (10 ft)
- 2290-5-MHV 5kV SHV Female–MHV Male Cable, 3m (10 ft)
- 2290-5-SHVBH 5kV SHV Male Bulkhead Connector
- 2290-5-RMK-1 Single Fixed Rack Mount Kit for 5kV Power Supply
- 2290-5-RMK-2 Dual Fixed Rack Mount Kit for 5kV Power Supply

For 2290-10:
- 2290-10-SHVUC 10kV SHV Male to Unterminated Cable, 3m (10ft)
- 2290-10-SHV 10kV SHV Male–SHV Male Cable, 3m (10 ft)
- 2290-10-SHVBH 10kV SHV Female Bulkhead Connector
- 2290-10-RMK-1 Single Fixed Rack Mount Kit for 10kV Power Supply
- 2290-10-RMK-2 Dual Fixed Rack Mount Kit for 10kV Power Supply

For both:
- 2290-PM-200 10kV Protection Module
- 2290-INT-CABLE 3-Pin Connector to Unterminated Interlock Cable
- 4299-7 Fixed Shelf Rack Mount Kit
- KPCI-488LP A IEEE-488.2 Interface Board for the PCI Bus
- KUSB-488B IEEE-488.2 USB-GPIB Interface Adapter for USB port with built-in 2m (6.6 ft) cable
- 7007-05 Double Shielded Premium IEEE-488 Interface Cable, 0.5m (1.6 ft)
- 7007-1 Double Shielded Premium IEEE-488 Interface Cable, 1m (3.2 ft)
- 7007-2 Double Shielded Premium IEEE-488 Interface Cable, 2m (6.5 ft)
- 7007-3 Double Shielded Premium IEEE-488 Interface Cable, 3m (10 ft)
- 7007-4 Double Shielded Premium IEEE-488 Interface Cable, 4m (13 ft)

Make Precise Current Measurements Lower Than 1µA

Use a sensitive Keithley measurement instrument, such as a Keithley SourceMeter® Source Measure Unit (SMU) instrument, to measure current drawn by the device under test (DUT) that is below the sensitivity of the Series 2290 Power Supplies. Keithley SourceMeter SMU instruments can provide sensitivity as low as 0.1fA. The following diagram shows how the Model 2290-PM-200 Protection Module protects the low voltage SourceMeter SMU instrument from high voltages when the DUT breaks down. The leakage current of the protection module limits the measurement resolution to picoamp levels, which is five decades more sensitive than the current measurement resolution of the Series 2290 Power Supplies. Keithley can provide a complete high voltage test capability with the most current measurement sensitivity available anywhere.

Reverse breakdown testing of a high voltage diode using a Keithley SourceMeter SMU instrument to measure leakage current. The Model 2290-PM-200 SMU Protection Module protects the SourceMeter SMU instrument from high voltage when the diode breaks down.

Easily Automate a High Voltage Test System

The Series 2290’s IEEE-488 interface allows the creation of an automated high voltage test system. Software drivers are supplied to simplify and accelerate test system development. This further enhances safety as the high voltage can be controlled from a remote location.

1. The output voltage can be programmed to a voltage lower than 50V; however, performance below 50V is not specified.
2. Add ±2.5VDC when Filter 1 or Filter 2 is enabled.
3. Regulation specifications apply for greater than 25VDC (with full load), or 50VDC (with no load). Below these values, the unit may not regulate correctly.
4. Peak-to-peak values are within five times the RMS value.
5. Add 2.5µA offset when Filter 1 or Filter 2 is enabled.
6. Times apply with the current limit set to 105% of full scale.
7. Loads are fully resistive.
