Behind every power supply challenge that involves reliability, flexibility and tight space... there is a Kepco Series HSF/HSP solution.

HOT SWAP REDUNDANT, USER CONFIGURABLE, LOW PROFILE POWER SUPPLIES

SERIES HSF

The Kepco HSF series of hot-swappable plug-in power supplies are designed to be combined in an N+1 fault-tolerant power system. Built-in forced current sharing and or-ing diodes are provided for this purpose. HSF may also be used independently as a multi-output power supply.

Metered Version HSF
(Add suffix "M" to the model number)

FEATURES

- Plug-in construction. Easy mount and dismount.
- User configurable combinations of 50, 100, 150, 350, 600 and 1200/1500 watt plug-in modules.
- Parallel for N+1 redundancy with or-ing diodes built in.
- All models have active PFC (Power Factor Correction).
- NEBS TR-WWT-4063 qualified.
- Front panel voltage trimming.
- Keyed construction to prevent incorrect module placement. The HSF are keyed according to their voltage rating. When the corresponding rack adapter key (pin) is installed by a user, only an HSF of the correct voltage can be inserted into the keyed slot.
- All HSF provide separate remote error sense terminals: 0.25V drop/wire.
- Forced current share is used to configure an N+1 system. When the current share bus of paralleled HSF are connected together, the load current divides equally. If one unit fails, the remaining units will divide the load equally among themselves and continue to supply uninterrupted current to a critical load. The failed unit is isolated by built-in or-ing diodes.
- A built-in relay provides either normally open (close on failure) or normally closed (open on failure) contacts that may be used to provide an external failure indication.
- The HSF obtain mains power and provide output via a 24 pin connector that mates with a corresponding connector in the rack adapter.
- Reset button (350W only). Restores output after an overvoltage or overcurrent or thermal overload induced shutdown.
- Safety: designed to meet UL 1950, CSA C22.2 No. 234 (M90) level 3 and EN60950 (a-c input only).
- Bellcore requirements: designed to meet NEBS GR-63-CORE specifications. Certified for an RA 19-6B with six HSF 150W plug-ins tested per GR-63-CORE, level 4 (earthquake and office vibration).

LOW PROFILE POWER SUPPLIES

HSF 1U RACK HOUSING

The RA 19-1U rack adapter mounts up to four HSF 50, 100 or 150 Watt-1UR power supplies. Each plug-in power supply is equipped with a power on/off, indicator LEDs and voltage test points.

The RA 19-1U provides access to the DIP switches and rack keying without disassembling the rack. It also provides a redundant scheme with modules 1 and 3 being powered from one a-c input and modules 2 and 4 from a second a-c input. Module numbering is left to right facing the front panel.

The rack adapters permit almost any combination of independent, series and/or parallel-redundant operation. Parallel pairs in series provide increased voltage with N+1 redundancy. Each 1U rack adapter can provide up to 200V (series), 140A (parallel), or 100V/70A (parallel-redundant, N+1 pairs). System capability is further increased by multiple 1U rack adapters in parallel/series.

- See Temperature vs Output Power Curve. Maximum Power Rating (W) = Nominal Output Volts (V) x Maximum Output Current (A). Reducing voltage allows operation without degradation at higher current as long as maximum power rating is not exceeded.
- Overcurrent Limit is rectangular (50W) or hiccup type (100W, 150W). After the overload is removed, output is automatically restored.
- Forced current sharing not available.

Three HSP models shown in RA 60 Housing

SERIES HSP

The Kepco HSP series comprises a group of ten models, seven 1000 watt power supplies with outputs from 3.3 volts to 48 volts and three 1500 watt power supplies with outputs from 24 volts to 48 volts. All models feature current-sharing for parallel redundant N+1 operation. Models with the OR-ing diode (suffix R), are capable of hot swapping when plugged into Kepco's RA 60 series rack adapter. A mechanical keying scheme allows the user to define which power supply will plug into a specified slot in the housing. Output voltage and current limit settings are adjustable from the panel and may be remotely adjusted.

This KEPCO product is backed by a firm 5-YEAR WARRANTY

Metered Version HSP
(Add suffix "M" to the model number)

FEATURES

- Remote sensing (0.5V for 3.3 and 5V models, 0.8V for all others).
- Control/programming of the voltage channel, current limit, overvoltage set point. The output voltage is remotely trimmable by resistance. Both the output voltage and current limit are adjustable over the range 20%-100%.
- Setpoint monitors for voltage and current permit online adjustment of output limits.
- Switch selectable Bellcore-type current "walk-in" characteristic for battery charger applications.
- Front panel status indicators, duplicated by form C relay contact status flags at rear panel connector: POWER, DC FAIL, OVERTEMP, FAN FAIL.
- Safety Agency Approvals: Recognized component with SELV output per UL 60950, CSA 950, VDE IEC 950/EN60950 for a-c mains operation.
- HSP are capable of sustaining full load operation through the loss of one full mains cycle at any source voltage without indication of failure. If mains power is lost for more than one cycle, HSP provides a flag, a minimum of 5 milliseconds before the output loses regulation. Total effective hold-up time exceeds 27 milliseconds.
- 5" x 5" cross-section plug-ins meet EIA standard for 3U height. Fit three abreast in EIA standard 19" equipment racks (four abreast in 24" racks).
- HSP are fully protected for any overload including a short circuit. Normal overload protection is continuous current limiting. A switch selectable option will latch the power off after 20 seconds to avoid damage to load wires. An overvoltage protector latches the power off whenever the output exceeds a user-set limit.
- Remote control of HSP is provided via one of two isolated TTL-level signals, one normally high and the other normally low. An internal 5V supply powers this circuit and provides the auxiliary 5V, 100mA output. This voltage is available whenever source power is applied, whether or not the main output is inhibited. The main output is normally ON if no remote logic is applied.
- HSP meet all EN50082-2 (heavy industrial) immunity levels including mains lightning surge. See also ANSI C62.41.
